

LLM Engineering

MASTER AI & LARGE LANGUAGE MODELS

WEEK 8 DAY 3

Continuing to Level Up

What you can now do

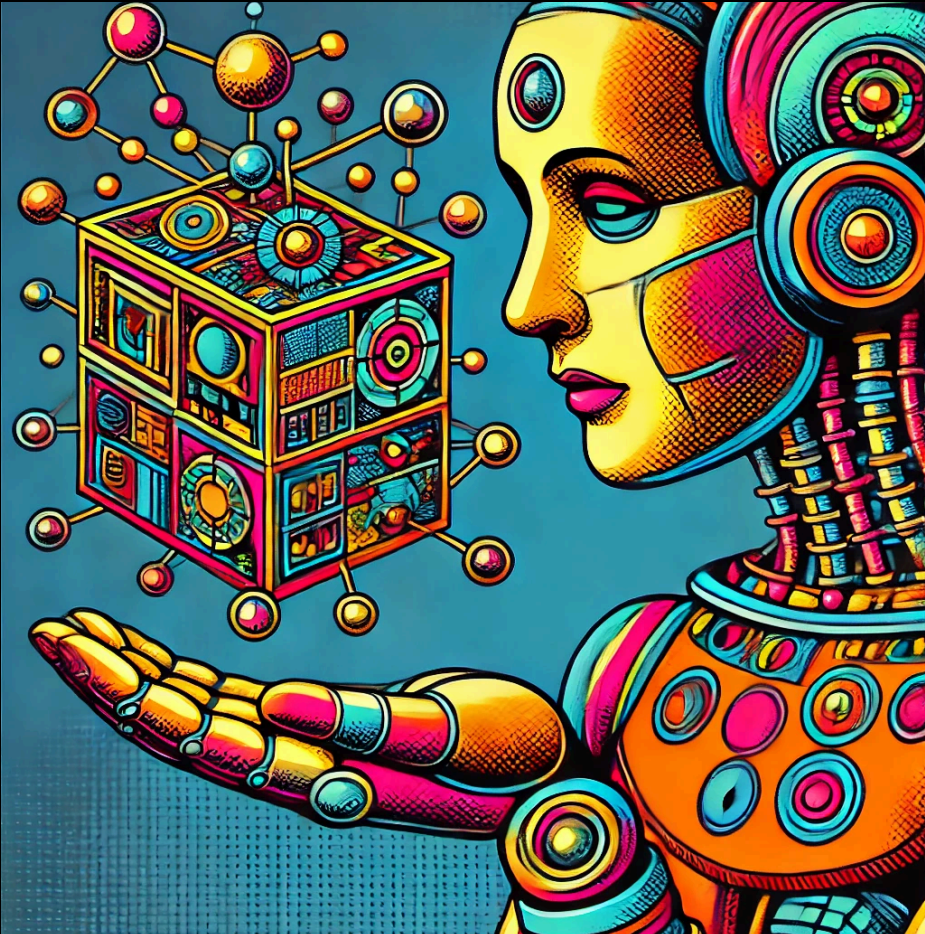

- Generate text and code with Frontier Models and Open Source models using APIs and HuggingFace, including tools, assistants and RAG
- Follow a 5 step strategy to solve problems, including dataset curation, making a baseline model, and fine-tuning a Frontier model
- Confidently carry out the end-to-end process for selecting and training specialized open source models that can outperform the Frontier
- Deploy multiple models to production including proprietary LLMs on Modal, a RAG workflow with Frontier models, and ML models

By end of today, you will also be able to

- Use Structured Outputs to ensure frontier models respond with a spec
- Develop even further experience using models to solve problems

NEW SKILL

Structured Outputs

A new ability for Frontier Models

- An alternative to JSON generation
 - Specify precisely how you want the model to reply
 - Define it with a Class
 - The model will create an instance of this Class
 - Useful for generating data in precisely a given format; sometimes tools / function-calling will be the better method
-

WEEK 8 DAY 3

Can you believe it - 95%

What you can now do

- Generate text & code with Frontier Models and Open Source models using APIs and HuggingFace, with tools, Structured Outputs, assistants and RAG
- Follow a 5 step strategy to solve problems, including dataset curation, making a baseline model, and fine-tuning a Frontier model
- Confidently carry out the end-to-end process for selecting and training specialized open source models that can outperform the Frontier
- Deploy multiple models to production including proprietary LLMs on Modal, a RAG workflow with Frontier models, and ML models

After tomorrow you will also be able to

- Define Agent Frameworks, Agentic Workflows in more detail
- Build an Agent Framework that sends push notifications with great deals
