

LLM Engineering

MASTER AI & LARGE LANGUAGE MODELS

WEEK 8 DAY 3

Going Deep with Agentic AI

What you can now do

- Generate text & code with Frontier Models and Open Source models using APIs and HuggingFace, with tools, Structured Outputs, assistants and RAG
- Follow a 5 step strategy to solve problems, including dataset curation, making a baseline model, and fine-tuning a Frontier model
- Confidently carry out the end-to-end process for selecting and training specialized open source models that can outperform the Frontier
- Deploy multiple models to production including proprietary LLMs on Modal, a RAG workflow with Frontier models, and ML models

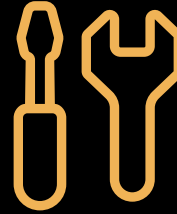

After today you will also be able to

- Define Agent Frameworks, Agentic Workflows in more detail
- Build an Agent Framework that sends push notifications with great deals

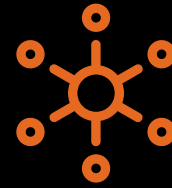

The Hallmarks of an Agentic AI solution

Breaking a larger problem into smaller steps carried out by individual processes / models

Using Tools / Function Calling / Structured Outputs

An Agent Environment in which Agents can collaborate

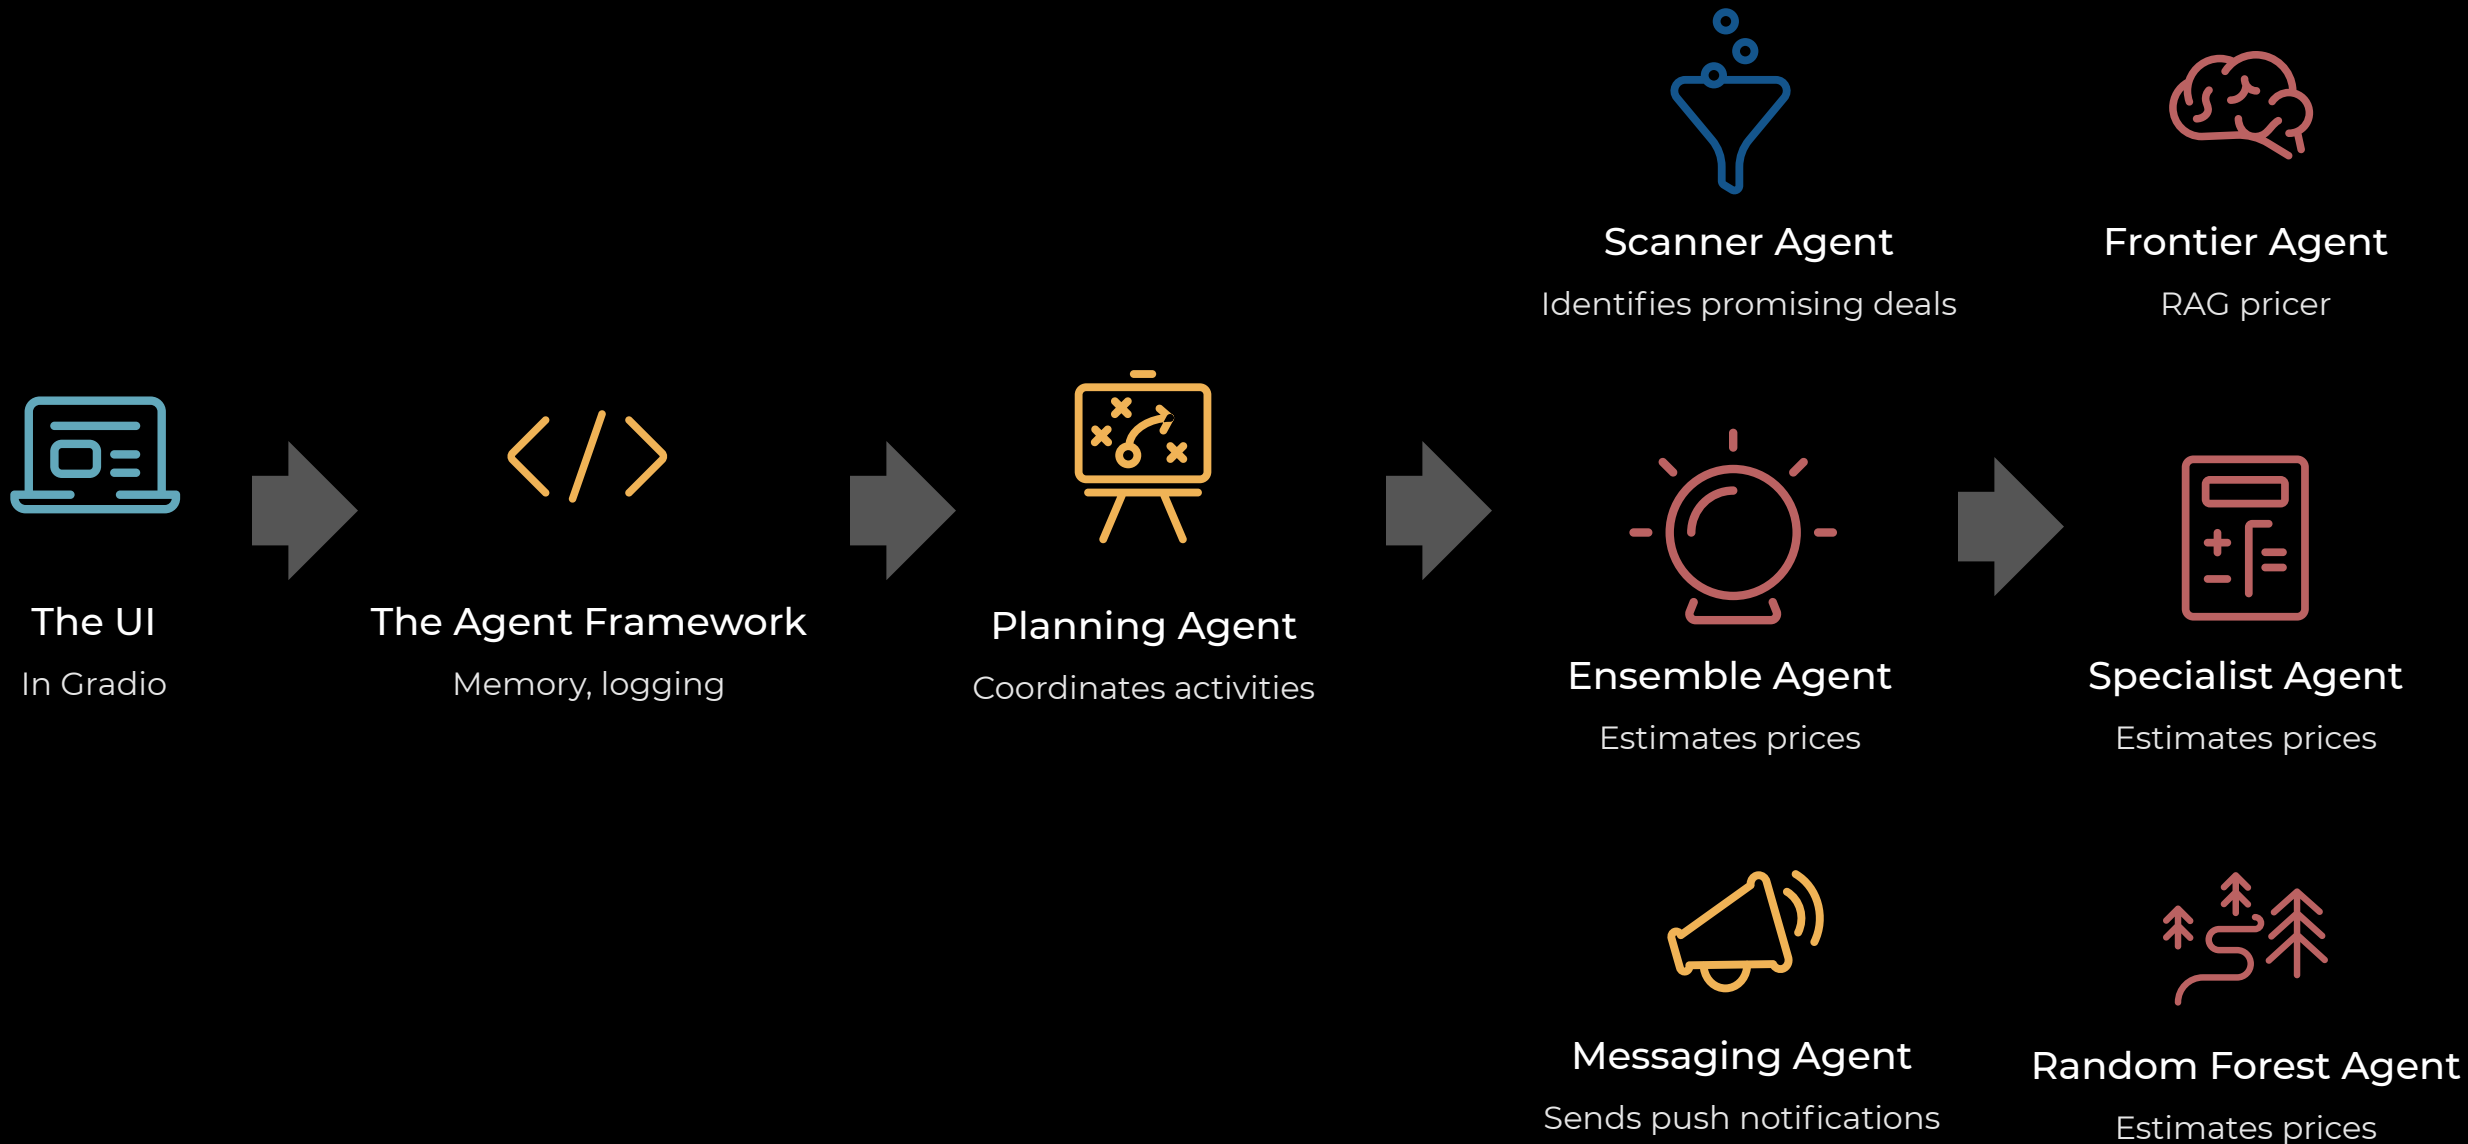

A Planning Agent that coordinates activities

Autonomy & Memory - existing beyond a chat with a human

Agent Workflows

WEEK 8 DAY 4

One. Day. Left.

What you can now do

- Generate text & code with Frontier Models and Open Source models using APIs and HuggingFace, with tools, Structured Outputs, assistants and RAG
- Follow a 5 step strategy to solve problems, including dataset curation, making a baseline model, and fine-tuning a Frontier model
- Confidently carry out the end-to-end process for selecting and training specialized open source models that can outperform the Frontier
- Deploy multiple models to production including proprietary LLMs on Modal, a RAG workflow with Frontier models, and ML models
- Build Agentic Workflows with Planning, Memory, Database and multiple Agents collaborating to solve a complex task

After tomorrow you will also be able to

- Master AI and LLM Engineering!!!
